

Etowah Utilities

Cross-Connection Notice To Our Customers

Over the next few months, the warm weather will bring people outdoors to work in their yards and gardens and begin getting swimming pools ready. **Etowah Utilities** would like to ensure that our customers are aware of the dangers associated with these activities. An ordinary **garden hose** is a common way to contaminate a water supply when the hose is submersed in any liquid or attached to certain devices used to spray pesticides or herbicides. This forms a **cross connection**. A cross connection is a situation where a possible source of contamination is directly linked to our public water system. If the end of your hose is connected to a chemical container, swimming pool or other contaminant during a water main break or fire, the substance can be siphoned back into the water system. This condition, known as **back siphonage**, could cause a public health hazard. Devices are available to prevent this problem; however the best solution is to always be careful how you use your water hose.

Please help us provide a safe supply of water to all of our customers. Remember; never place your water hose in anything you would not want to drink. For more information on cross connections and how to protect against them, call our office at 423-263-9441.
